

NVIDIA® IRAY® FOR RHINO DISCOVER SCALABLE, INTERACTIVE RENDERING.

NVIDIA® Iray® for Rhino is a plug-in rendering solution that helps designers using McNeel Rhinoceros® to quickly produce physically based, photorealistic visualizations.

Iray is integrated into Rhino, rendering directly within its viewports to give you continual, realistic feedback as you craft your model's form, materials, and lighting. Iray's physically based capability predicts the behavior of real-world materials and lights, giving you accurate results with minimum setup or specialized knowledge. It also supports the NVIDIA vMaterials Library—which includes hundreds of materials—as well as material exchange capabilities with other NVIDIA Material Definition Language (MDL)-compatible applications.

NVIDIA IRAY FOR RHINO NEW FEATURES

- > Physically based photorealistic rendering using all supported GPUs and CPUs within the machine
- > Scalable distributed rendering with Iray Server
- > Interactive updates (in Iray Perspective View) on lights, objects and cameras when making scene adjustments
- > NVIDIA Quadro® VCA support for interactive rendering on remote GPUs with linear scalability to interactive quality
- > VR enabled: Render mono and stereo images using three different lens types

SYSTEM REQUIREMENTS

SOFTWARE	McNeel Rhinoceros 5
OPERATING SYSTEM	64-bit Windows 7, 8.1 and 10

IRAY PERFORMANCE SCALING WITH QUADRO DESKTOP GPU's

Tests run on a workstation with Intel Xeon E5-2697 V3, 14 cores 2.6GHz, 32GB RAM, running Win 7 64-bit SP1 and driver version 375.86. Performance testing completed with internal NVIDIA Iray tests at HD resolution.

PHYSICALLY-BASED MATERIALS - VERIFIED FOR ACCURACY

vMaterials

The NVIDIA vMaterials catalog for product and building design is a collection of real-world materials described in the NVIDIA Material Definition Language (MDL). Designed and verified by NVIDIA material specialists for accuracy, control, and consistency, vMaterials provide a fast, reliable way to add realistic materials to your designs.

Easily browse, change, and adjust materials to get just the look that's needed within the supported applications. While vMaterials is the perfect addition to the Iray plugin products, it can be used in any application that supports NVIDIA MDL.

FEATURES

Rendering

- Physically based path-trace rendering within Rhino's perspective viewport for accurate preview of final results while adjusting scenes
- Progressive rendering for interactive feedback during scene edits
- Optimized sampling for accurate caustics
- Simultaneous render element generation with negligible speed impact
- Fast Depth of Field for smooth interactive adjustments
- Support for custom wallpapers, independent of lighting
- Fast Depth of Field with picking feature for smooth interactive adjustments

Lighting

- Interactive updates (in Iray Perspective View) upon adjusting light parameters and position
- Image-based lighting for fast, convincing environments
- New Iray light object that can switch between spot, point, area, etc.
- Real-world units of lighting attributes for accurate simulation
- Lighting from emissive materials and geometry
- Physical sun and sky system
- Add additional light sources without cost of speed

Materials

- Physically based materials using an intuitive layering approach leveraging NVIDIA MDL
- Extensive material flexibility, including displacement, subsurface scattering, thin film, gem, etc.
- Layered material workflow with multiple windows showing cooperating layers
- MDL import and export for sharing materials between different Iray applications or MDL-compliant renderers (e.g., NVIDIA mental ray®)
- Support of MDL Displacement materials using either parametric or edge length displacement methods for enhanced material detail

Workflow

- Continuous visual feedback in Live Render window after scene adjustments
- Interactive tone mapping towards desired exposure and white balance
- Support of Rhino turntable and fly-through animation
- Python scripting support
- Iray Server support for efficient, scalable offline rendering and streaming
- NVIDIA Quadro VCA support for interactive rendering on remote GPUs with linear scalability
